DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

1. Claims 1-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Meyers (5,543,966) in view of Brandt et al. (5,93,147).

Meyers discloses (with reference to Fig. 1) the invention as claimed--a coated optical lens including:

a lens element (10); and

a coating on a surface of said lens element (see body of patent)--EXCEPT FOR the additional teaching wherein said coating on said surface of said lens element exhibits a substantially balanced reflectance from the centre to a radius proximate the edge of said lens element.

Brandt et al., however, teach a coating (See abstract, and Fig. 5) which provides substantially balanced reflectance from the

centre to a radius proximate said edge (in this case of a mirror face). (It is noted that Applicants' substantially balanced reflectance admits a broad range of interpretation; more critically, the meaning Applicants associate with this claimed phrase has not been read into the claims, since although the claims are interpreted in light of the specification, limitations from the specification are not read into the claims.)

It would have been obvious to one having ordinary skill in the art at the time the invention was claimed to have modified the invention of Meyers such that its coating provide substantially balanced reflectance from the centre to a radius proximate said edge, as taught by Brandt et al., for at least the purpose of significantly improving the imaging performance of said optical lens.
